

EXTRACT TEST

Requirements

Write a small app/script that extract from this url:

```
http://www.goodreads.com/quotes/tag/fashion
```

all information as possible about quotes. At least, you must extract:

- Quote
- Author
- Tags

Notes

- You can use the programming language or library that you want.
- Please upload the code in a public repo such as GitHub.
- The output of the file must be a JSON or CSV file.
- Is only necessary the first page.

Bonus Points

- Use Python.
- Extract author images and download them.
- Extract number of likes for each quote.
- Extract all pages.
