

PYTHON TEST 1: Numbers

Requirements

Write a small app that takes an integer and return a string representation of that integer with commas separating groups of 3 digits. For example:

```
print translate (1234)
u"1,234"

print translate (123456789)
u"123,456,789"
```

Notes

- You can use the programming language or library that you want.
- Please upload the code in a public repo such as GitHub.
- Input/output methods doesn't matter.

Bonus Points

- Use Python.
