BIG FILES TEST

Requirements

Write a small app/script that reads this CSV file with information about products from an ecommerce website.

```
http://52.5.231.206:6891/items/products.csv
```

NOTE: The CSV file has information about the content fields in the first row.

Now, modify the app/script (or create new one) to show this information:

- Print the 10 most expensive products.
- Print the 10 most cheaper products.
- Print the 10 most discounted products.
- Print how many products are **red**.

Notes

- For each response, you must print how much time takes to calculate.
- You can use the programming language or library that you want.
- Please upload the code in a public repo such as GitHub.

Bonus Points

- Use Python/Pandas or R.
- As fast response as possible.
